

George Lindley

AI Solutions Consultant

Riyadh, Saudi Arabia | george.j.lindley@gmail.com | georgelindley.com | British citizen

Client-facing AI solutions consultant with 10 years' Middle East experience across education and commercial roles, completing an MSc in Business Analytics. Builds applied AI and analytics products that turn messy institutional workflows into software people adopt, including a regulatory database published with United Nations University and UC Davis.

APPLIED AI AND ANALYTICS PROJECTS

Regulated Plants Database

regulatedplants.unu.edu

Public reference database published with **United Nations University (UNU-INWEH)** and **UC Davis**.

- Consolidates plant regulations for **2,192** taxa across **104** jurisdictions from government sources into a governed SQLite and GeoJSON dataset, with an interactive map and species search.
- Hosted on UNU's domain, featured in UNU's Sustainability Nexus AID Tools collection and presented at the Dresden Nexus Conference 2025.

Stack: Python, SQLite, GeoJSON, Flask, Leaflet

Causal Blocks

causalblocks.com

Open-source tool that teaches causal inference by letting people draw it.

- Users drag real data onto a canvas and draw cause-and-effect arrows; a DoWhy estimate updates with every arrow, and each variable is labelled by its causal role.
- **960** estimates precomputed, each with **3** refutation tests; identification logic ported to JavaScript and verified against DoWhy on **600** random graphs, so it runs with no server.

Stack: Python, DoWhy, JavaScript, static web hosting

Saudi Procurement Bid Intelligence

MSc dissertation, Aston University

How far can public award data guide supplier bids in the Saudi market?

- Built a dataset of **75,000** Etimad procurement competitions (2020–2025), cleaned and entity-resolved.
- Compliant bids on the same contract are priced **more than twice** apart, and winners typically bid **14%** below the next acceptable offer: margin suppliers leave on the table.
- Pre-registered, falsifiable conjectures on rival counts, rejection risk and winning price, with refutation thresholds frozen before results were seen.

Stack: Python, SQL, entity resolution, statistical modelling

Academic Progress

Pearson Middle East, 2020–2022

Data-led product strategy behind Pearson's best-selling English course in the region.

- Led regional collection of institutional data (Project Olympus) to size the addressable market and prioritise accounts, then validated the product through focus groups.
- Became Pearson's **#1** English course in Africa, the Middle East and Turkey, **three** years running.
- Anchor university account grew about **50%** a year over five years, with price per course up **70%** after the move to blended digital courseware.

Methods: Market sizing, CRM analytics, account prioritisation, focus groups

PROFESSIONAL EXPERIENCE

Regional Commercial Lead

July 2021 – Present

Pearson Regional Headquarters, Riyadh

- Led commercial and growth strategy across five Middle East markets, delivering **18%** year-on-year revenue growth through segmentation, demand forecasting and CRM analytics.
- Translate institutional and workforce needs into product positioning, pricing and go-to-market decisions with senior commercial, academic and product stakeholders.
- Client-facing implementation lead for universities, vocational providers and public-sector education bodies, from discovery through to adoption.

Learning Consultant / Sales Manager

November 2017 – July 2021

Pearson Saudi Arabia and Middle East

- Advised universities on English programmes, digital platform rollouts and assessment projects, managing stakeholders through adoption and change.
- Ran sales operations, forecasting and territory planning, and built a regional product line into a multi-million revenue generator.

Language Teacher / EdTech Contributor

April 2016 – October 2017

King Saud University

- Taught academic English and contributed interactive content, assessments and digital exam-preparation workflows.

CAPABILITIES

- **AI and LLM systems:** LLM workflow and prompt design, embeddings, vector search, RAG, structured outputs, guardrails, human-in-the-loop review, retrieval evaluation
- **Data and backend:** Python, SQL, Flask, FastAPI, SQLite, Qdrant, APIs, scheduled ingestion, data validation
- **Analytics:** causal inference, forecasting, optimisation, segmentation, CRM analytics, dashboards, evaluation design
- **Delivery:** discovery workshops, requirements, prototype-to-pilot, executive communication, change management and adoption

EDUCATION AND TRAINING

MSc Business Analytics, Aston University

2025 – 2026 (expected)

Dissertation: Saudi Procurement Bid Intelligence

MA International Relations, University of Warwick

2010 – 2011

BSc Modern Languages, Aston University

2006 – 2009

CS50x Introduction to Computer Science, Harvard University
