

George Lindley

AI Solutions Consultant

Riyadh, Saudi Arabia | george.j.lindley@gmail.com | georgelindley.com | LinkedIn | GitHub | British citizen

Client-facing AI solutions consultant with 10 years working with Saudi universities and government bodies, completing an MSc in Business Analytics. Builds applied AI products, including daily AI matching of Saudi government tenders and a database published with United Nations University and UC Davis.

APPLIED AI AND ANALYTICS PROJECTS

Saudi Tender Intelligence

Self-initiated, Pearson KSA

Built an AI bid desk for Pearson, which had none: daily matching of new education tenders in KSA.

- Scrapes Etimad **5x a day**, about **100** new tenders a day and **50,000** a year, matching Arabic tenders against Pearson's English profile with OpenAI embeddings and Qdrant.
- An LLM writes the reason behind each match, so colleagues act on the **2–3** a month that fit; briefed senior management on a year of this evidence to inform strategy in KSA.
- A two-tower neural recommender trained on six years of awards scores each match; next, a multilingual model.

Stack: Python, web scraping, OpenAI embeddings and LLM, Qdrant, two-tower recommender, scheduled jobs

Dissertation: Saudi Procurement Bid Intelligence

MSc Business Analytics, Aston University

Procurement business intelligence: how far can public award data guide supplier bids?

- Back-scraped **six years** of awards across all sectors: **75,000** competitions (2020–2025), entity-resolved.
- The highest compliant bid is often **more than double** the lowest, and winners typically bid **14%** below the next acceptable offer: margin suppliers leave on the table.
- Pre-registered, falsifiable conjectures on rival counts, rejection risk and winning price, with refutation thresholds frozen before results were seen.

Stack: Python, SQL, entity resolution, statistical modelling

Regulated Plants Database

regulatedplants.unu.edu

*Data consultant and developer for a database published with **United Nations University** and **UC Davis**.*

- Turned the research team's raw CSV files into a governed SQLite and GeoJSON dataset of **2,192** taxa across **104** jurisdictions, and designed and built the public web app.
- Advised on the schema and data-collection templates, and helped shape the research direction.
- Hosted on UNU's domain, featured in UNU's Sustainability Nexus AID Tools collection and presented at the Dresden Nexus Conference 2025.

Stack: Python, SQLite, GeoJSON, Flask, Leaflet

Causal Blocks

causalblocks.com

Open-source tool that teaches causal inference by letting people draw it.

- Users drag real data onto a canvas and draw cause-and-effect arrows; a DoWhy estimate updates with every arrow, and each variable is labelled by its causal role.
- **960** estimates precomputed, each with **3** refutation tests; identification logic ported to JavaScript and verified against DoWhy on **600** random graphs, so it runs with no server.

Stack: Python, DoWhy, JavaScript, static web hosting

PROFESSIONAL EXPERIENCE

Pearson

November 2017 – Present

Riyadh, Saudi Arabia

- **Across both roles:** KSA revenue grew **18%** a year from 2018 to 2024, helped by Academic Progress.
- Global titles don't sell in KSA, so I build the case for regional editions: market research, forecasts and the pitch to senior management, then local guidelines, USP, sales strategy and distribution.

Regional Commercial Lead, KSA and Bahrain

July 2021 – Present

- Lead commercial strategy for KSA and Bahrain; have managed an account manager since 2022.
- Championed **3** new schools titles for the most lucrative segments (2 in 2027, 1 in 2028), with a new bundled-solutions offer.
- Set up Saudi tender intelligence where Pearson had no bid desk (see projects), surfacing the 2–3 tenders a month worth acting on.
- Act as solutions consultant in university technical decisions, such as LTI integration versus batch registration for digital learning platforms.

Learning Consultant / Sales Manager

November 2017 – July 2021

- Championed **Academic Progress** from research to launch (focus groups, forecasts, local guidelines, USP): Pearson's **#1** English course in Africa, the Middle East and Turkey, 2020–22.
- Led its expansion beyond KSA, into Qatar, Kuwait and the UAE.
- Ran sales operations, forecasting and territory planning; grew a regional product line to **USD 7M** in sales.

King Saud University

April 2016 – October 2017

Riyadh, Saudi Arabia

Language Teacher / EdTech Contributor

- Taught academic English and built interactive content, assessments and digital exam-prep workflows.

CAPABILITIES

- **AI and LLM systems:** embeddings, vector search (Qdrant), cross-lingual retrieval, LLM-written explanations, prompt design
- **Data and backend:** Python, SQL, Flask, SQLite, GeoJSON, web scraping, scheduled pipelines, entity resolution, data validation
- **Analytics:** causal inference (DoWhy), statistical modelling, pre-registered research design, forecasting, segmentation, CRM analytics
- **Delivery:** discovery workshops, requirements, prototype-to-pilot, executive communication, change management and adoption

EDUCATION, TRAINING AND LANGUAGES

MSc Business Analytics, Aston University

2025 – 2026 (expected)

Dissertation: Saudi Procurement Bid Intelligence

MA International Relations, University of Warwick

2010 – 2011

BSc Modern Languages, Aston University

2006 – 2009

CS50x Introduction to Computer Science, Harvard University

Completed 2023

Languages: English (native), Spanish (C1), French (C1), Arabic (learning)
